

Would you be willing to join us for a short online discussion group about using photographs to assess eczema severity?

We are developing a machine learning algorithm (called EczemaNet) that will generate eczema severity scores based on photographs of eczema. We anticipate this tool being used to aid communication between patients and healthcare professionals in various settings.

This could include:

- Improving communication during remote consultations
- Helping with triage of patients
- Improving communication between primary care and secondary care during referrals or “advice and guidance” with consultants
- Patient self-monitoring and supporting treatment decisions

We would love it if you could join us for a brief discussion about this project and help us to understand what would be most useful to you clinically.

What we are trying to understand

- How EczemaNet could be used within clinical care pathways, especially within general practice.
- How photos are currently used in your clinical practice.
- What functionality could be useful?
- How best to facilitate adoption into clinical practice.

How you can contribute

- Please fill in the form [here](#) if you are interested in joining a 1h-online session. Slots are available at the following times:
 - 18:00-19:00 on Tuesday 23 September
 - 12.30-13.30 on Thursday 25 September or Friday 26 September (whichever we have more participants)
- We are also happy to arrange 1-1 interviews.
- The aim is to discuss implementation challenges of adopting EczemaNet into clinical practice and to help plan an implementation study.

What you will get by joining the sessions/interviews

- You will learn about EczemaNet.
- You will help future implementation of EczemaNet.
- You will receive a £20 shopping voucher for your time.
